Respect and honor for women, who are the pillar of society and the beauty of our lives, has always been a great value for our people. In today's development of our homeland, in the life of the family and society, women occupy an important place and position. In particular, our motto "Attention to women - attention to the future" is not in vain. Today, special attention is paid to increasing the social activity of women in society and becoming enlightened.

It is no exaggeration to say that the concept of an enlightened woman is a concept that is very dear to our hearts. If the woman of the family is enlightened, then goodness, peace, grace, prosperity, and harmony will accompany this household. To be an enlightened woman, every woman needs to acquire knowledge. First of all, it is important for every woman to strive for enlightenment from childhood and adolescence and make it her goal to live by acquiring knowledge. There is a saying in our people that if you want to educate a person, give your son a good upbringing, and if you want to educate a society, educate your daughter. Because a mother who is going to have a daughter will lead her children to enlightenment as well as herself.

Women are respected in Islam as mothers, sisters, honest wives, and daughters. Women are seen as a beautiful creation, a symbol of modesty and modesty, and are taught that they must be protected and cherished, and this responsibility is placed on men. A daughter is in the palm of her father's hand, a woman is in the lap of her husband, and mothers are commanded to be raised and honored above the heads of their children.

At the same time, women are becoming a major social force in our society. All events held in our country today cannot take place without the participation of our women. Especially in the fields of science, education, and culture, thousands of scholars and virtuous women are working, who have their own position and worthy jobs in the development of society. The fact that more than eighty national and international documents have been adopted in our country aimed at protecting the role of women in society is a practical proof of the high attention and care for women. Today, we see the increasing activity of our selfless women in all spheres of our social life. After all, the cultural level and spiritual perfection of any society is determined by its attitude towards women.

It is known that our time is the age of technology, and in developed countries there is no sector that has not been digitized and the green digitizing system has not been introduced, but at the same time, it is not clear how important the role of half of the world's population, that is, women, is in this process. In many countries, secondary education is compulsory and girls and boys participate equally in education, and accordingly, although a significant part of undergraduate students in many countries of the world are women, indicators show that over time, the number of women at higher academic levels is decreasing and their number is not in the majority. Women are more active in the arts and social sciences, natural sciences, education and upbringing, and less in the fields of technology, engineering, and exact sciences. Basically, women are inclined to work in jobs that emphasize upbringing and physical care, and are less active in jobs that rely on technical mechanical skills and creative thinking

But it is worth noting that in the last two years the number of female masters in Uzbekistan has increased by 2-3 times. In addition, gender differences in the choice of scientific directions are also less pronounced. Although the introduction of technologies into social life, from household appliances to agricultural and industrial ones, that is, this evolutionary process has changed many boundaries, traditions, customs, and even lifestyles, and has created conditions for women to be active in a wide range of social activities, gender equality in society can be seen in the techno-industrial sectors. Today, technological capabilities are an important factor of production. This is leading to major changes in human life. Knowledge plays a key role in this process. Therefore, the demand for qualified labor is increasing day by day. Science and technology cover a wide range of activities. How science and technology relate to women depends on the definition of science and technology, which is generally considered to be knowledge that pertains to the physical world and its phenomena. Today, it is viewed as “knowledge and technology” and can be seen primarily as a framework for human development and the broad horizon of knowledge and technology related to women. The entry of women into knowledge-based production is primarily seen in their participation in scientific activities

This requires education, and as a result, women are provided with jobs. The educational stage actually creates skills and gives them strength, causing women to climb the academic ladder. Science, knowledge-producing professional forces also manifest themselves. In our society, they are in no hurry to give leadership or management positions to women, each society has its own unwritten laws, the monotony of men, sometimes a lack of trust in women, it seems to us that they have been ingrained in our views. Often, a woman employee can only be given a position if there are not enough personnel. Such views also start from the family. It is in the family that the role of fathers is very important. If they pay more attention to their daughters, support them in their studies and work, this mentality will also be formed in society. The fact that after divorce, raising young children is more the responsibility of women also limits women's activities in society. When a woman has children, raising children becomes her first task. The salary doubles this responsibility. In such cases, a woman does not have time to work on herself and agrees to do even simple things to earn a living. It is no secret that in the last century, great changes have occurred in the lifestyle of people, especially in the social activities of women, mainly due to the development of science and technology. The development of comprehensive knowledge is the main axis and driving force of human growth and development. There is no limit to acquiring knowledge in Islam, they say, seek knowledge from the cradle to the grave, acquiring knowledge is not separated by gender - women and men, in this regard they are equal!

Our main dictionary also has a stable justice in this regard. In recent years, a number of decisions and decrees on gender equality in Uzbekistan are aimed at creating all the conditions to support the activities of our women and great importance is attached to them. History is a witness to the fact that the role of women in raising children is extremely high. It is known from history that behind many great people there is definitely a great mother or a great woman. For example, if we look at the life of Ahmad ibn Hanbal, may God have mercy on him, he was orphaned by his father early. His mother raised her only child with a love of knowledge. When Ahmad ibn Hanbal reached adulthood, he could not attend classes for a while due to financial worries, so his mother advised him, "Even if I go hungry, I am

happy, just do not give up on education." The great enlightener Abdullah Avloni said, "Girls should strive for knowledge more than anyone else. After all, with this knowledge they will educate the future generation," he said. Making women more educated and enlightened is one of the most important tasks on the path to achieving the Third Renaissance. Raising the status of women in society is one of the most important directions of our state policy. Therefore, as practical proof of the work in this regard, in recent years, a number of decrees and resolutions have been adopted aimed at increasing the position of the fairer sex in society, including the State Program for Supporting Women's Education for 2022-2026.

President Shavkat Mirziyoyev's words, "The cultural level of any society on earth is determined by its attitude towards women.... Your role and service in raising and raising healthy offspring and a harmonious generation cannot be compared or evaluated with anything. Our life is bright because of your love, loyalty, devotion, and selflessness," are noteworthy. That is why in Uzbekistan, the issue of ensuring the rights and interests of women, creating decent working and living conditions for them, and realizing their abilities and potential has risen to the level of state policy in the country. An educated woman determines the path of development of society. Because it is women who raise children and form their minds, worldview, and level of knowledge.

Expand the ranks of dedicated professionals and enrich the scientific and technical field with new perspectives. The UN Secretary-General called for a strong defense of women's right to science, eliminating any rigid approaches, outdated views and various obstacles on this path. In the words of A. Guterres, "By filling classrooms, laboratories and offices with women scientists, we will all be doing our fair share to give wings to the unparalleled talents that exist in our world, but have so far been unused."

In conclusion, as our head of state emphasized, "If we create broad opportunities for our intelligent women, who have high knowledge and qualifications, to occupy influential positions in the legislative, executive, and judicial branches of government and act as trusted representatives of our women and our people, and if this situation becomes a permanent tradition in our social life, I am confident that we will have taken a significant step towards fairly resolving all the problems facing us and building a legal and democratic state and civil society."
